Checking In

- Location Permissions

Location Permissions

In order to use some features of MyWorkApp, you will need to enable location permissions. In addition to allowing location services for your web browser, you will need to allow access for the site. Find your device below for instructions on how to enable them.

iPhone / Safari

Safari is the default browser for iPhone. In Safari, a user needs to ensure that their site settings allow the use of location services.
You can enable location services for MyWorkApp by following these steps:

1. User is alerted that location is required.
2. Access the site settings by tapping the "AA" button in the top left of the screen, then tap "Website Settings".
3. Tap "Location", then tap "Allow".
4. Tap "Done" to close the site settings, and resume using MyWorkApp.

iPhone / Chrome

Chrome on iOS doesn't remember location permissions, so you will need to allow access every time. If you deny location permissions, you can reset the check by closing your tab and opening a new one.

Android / Chrome

In Chrome on Android, a user needs to ensure that their site settings allow the use of location services.
You can enable location services for MyWorkApp by following these steps:

1. User is alerted that location is required.
2. Access the site settings by tapping on the lock icon in the top left of the screen, then tap "Site settings" at the bottom of the resulting popup.
3. Under "Permissions", tap "Location access" and then tap "Allow" in the resulting popup.
4. Go back to your browser and resume using MyWorkApp.

Android / Firefox

In Firefox on Android, a user needs to ensure that their site settings allow the use of location services.
You can enable location services for MyWorkApp by following these steps:

1. User is alerted that location is required.
2. Access settings by tapping on the 3 dots in the bottom right corner of the screen, then tap "Settings".
3. Under "Privacy and security" tap "Site permissions", then tap "Exceptions".
4. Find the domain ending in "myworkapp.com" and tap on it.
5. Tap "Location", then tap "Allowed".
6. Close Firefox settings and resume using MyWorkApp.
